Lecture Notes are health learning materials consisting of related discussion points for use by faculty as class lectures, student reading material, and study notes for the students. They are created using the same process as modules, except that initial drafts are from a collection of lecture notes from faculty members.

With concise chapters, this text is renowned for its brevity, clarity and lavish illustrations. Lecture Notes on Diseases of the Ear, Nose and Throat

The shortage of adequately prepared health professionals is the most significant threat to world health that we face. This book, a co--publication with The Carter Center, focuses on the training of health professional educators--both teachers and practitioners--in low--resource countries at different levels of

technological and material sophistication. This comprehensive book trains health educators and practitioners to improve their pedagogical skills and to increase the quality and numbers of health workers. It also assists physicians, nurses, health officers, medical lab technicians, and environmental technicians to work with different cultures and linguistic groups in any one country. For the growing number of health educators and practitioners in developed countries who teach, research, and practice within the international context, it is an essential resource. Key Features: Preface by former US President Jimmy Carter Offers teaching and learning methods evaluated and field tested through The Carter Center's Ethiopia Public Health Training Initiative with positive results

that reflects the increasing interconnectedness of health and its determinants. Major socio-economic, environmental and technological changes have produced new challenges, and exacerbated existing health inequalities experienced in both developed and developing countries. This textbook focuses on managing and preventing these challenges, as well as analysing critical links between health, disease, and socio-economic development through a multi-disciplinary approach. Featuring learning objectives and discussion points, Global Health Lecture Notes is an indispensable resource for global health students, faculty and practitioners who are looking to build on their understanding of global health issues.

'This is a very stimulating book!' - N. G. de Bruijn. 'This short book will provide extremely enjoyable reading to anyone with an interest in discrete mathematics and algorithm design' - ""Mathematical Reviews"". 'This book is an excellent (and enjoyable) means of sketching a large area of computer science for specialists in other fields: It requires little previous knowledge, but expects of the reader a degree of mathematical facility and a willingness to participate. It is really neither a survey nor an introduction; rather, it is a paradigm, a fairly complete treatment of a single example used as a synopsis of a larger subject' - ""SIGACT News"". 'Anyone would enjoy reading this book. If one had to

learn French first, it would be worth the effort!' - ""Computing Reviews"". The above citations are taken from reviews of the initial French version of this text - a series of seven expository lectures that were given at the University of Montreal in November of 1975. The book uses the appealing theory of stable marriage to introduce and illustrate a variety of important concepts and techniques of computer science and mathematics: data structures, control structures, combinatorics, probability, analysis, algebra, and especially the analysis of algorithms. The presentation is elementary, and the topics are interesting to nonspecialists. The theory is quite beautiful and developing rapidly. Exercises with answers, an annotated bibliography, and research problems are

included. The text would be appropriate as supplementary reading for undergraduate research seminars or courses in algorithmic analysis and for graduate courses in combinatorial algorithms, operations research, economics, or analysis of algorithms. Donald E. Knuth is one of the most prominent figures of modern computer science. His works in ""The Art of Computer Programming"" are classic. He is also renowned for his development of TeX and METAFONT. In 1996, Knuth won the prestigious Kyoto Prize, considered to be the nearest equivalent to a Nobel Prize in computer science.

comprehensive text. Building on a foundation of crystal structures, phase equilibria, defects, and the mechanical properties of ceramic materials, students are shown how these materials are processed for a wide diversity of applications in today's society. Concepts such as how and why ions move, how ceramics interact with light and magnetic fields, and how they respond to temperature changes are discussed in the context of their applications. References to the art and history of ceramics are included throughout the text, and a chapter is devoted to ceramics as gemstones. This course-tested text now includes expanded chapters on the role of ceramics in industry and their impact on the environment as well as a chapter devoted to applications of ceramic materials in clean energy

Statistical physics has its origins in attempts to describe the thermal properties of matter in terms of its constituent particles, and has played a fundamental role in the development of quantum mechanics. Based on lectures taught by Professor Kardar at MIT, this textbook introduces the central concepts and tools of statistical physics. It contains a chapter on probability and related issues such as the central limit theorem and

information theory, and covers interacting particles, with an extensive description of the van der Waals equation and its derivation by mean field approximation. It also contains an integrated set of problems, with solutions to selected problems at the end of the book and a complete set of solutions is available to lecturers on a password protected website at [www.cambridge.org/9780521873420](http://www.cambridge.org/9780521873420). A companion volume, *Statistical Physics of Fields*, discusses non-mean field aspects of scaling and critical phenomena, through the perspective of renormalization group.
