Chaos And Fractals The Mathematics Behind The Computer ...

Chaos occurs when a system is very sensitive to initial conditions. Initial conditions are the values of measurements at a given starting time. The phenomenon of chaotic motion was considered a mathematical oddity at the time of its discovery, but now physicists know that it is very widespread and may even be the norm in the universe.

What is The Connection Between Chaos Theory and Fractals?

While most traditional science deals with supposedly predictable phenomena like gravity, electricity, or chemical reactions, Chaos Theory deals with nonlinear things that are effectively impossible to predict or control, like turbulence, weather, the stock market, our brain states, and so on. These phenomena are often described by fractal mathematics, which captures the infinite complexity of nature.

Chaos theory is a branch of mathematics focusing on the study of chaos—states of dynamical systems whose apparently random states of disorder and irregularities are often governed by deterministic laws that are highly sensitive to initial conditions. Chaos theory is an interdisciplinary theory stating that, within the apparent randomness of chaotic complex systems, there are underlying patterns, interconnectedness, constant feedback loops, repetition, self-similarity, fractals, and ...

"The book is written for everyone who wants to learn details of chaos theory and fractal geometry, also for readers who have not much knowledge of technical mathematics. In the fourteen chapters the central ideas and concepts of chaos and fractals are developed" (F. Haslinger, Monatshefte für Mathematik, Vol. 144 (4), 2005)

Fractals and Chaos: An Illustrated Course (1997) should be accessible to science undergraduates and a broad range of scientists: its focus is on applications to the physical sciences and it is aimed at those who want to be able to actually use fractal geometry and chaotic dynamics. It assumes acquaintance with some mathematics, but no details: so the basic idea of limits but no involved calculus, the concepts of Fourier transforms and differential equations without any ability to manipulate ...

Math Explorers' Club - Chaos and Fractals

Fractal, in mathematics, any of a class of complex geometric shapes that commonly have "fractional dimension," a concept first introduced by the mathematician Felix Hausdorff in 1918. Fractals are distinct from the simple figures of classical, or Euclidean, geometry—the square, the circle, the sphere, and so forth. They are capable of describing many irregularly shaped objects or ...
