Fuzzy Logic vs Neural Network. Fuzzy Logic belongs to the family of many-valued logic. It focuses on fixed and approximate reasoning opposed to fixed and exact reasoning. A variable in fuzzy logic can take a truth value range between 0 and 1, as opposed to taking true or false in traditional binary sets. Neural networks (NN) or artificial neural networks (ANN) is a computational model that is developed based on the biological neural networks.

Publisher Summary. This chapter focuses on the basic principles of fuzzy logic. Fuzzy logic is a branch of machine intelligence that helps computers understand the variations that occur in the uncertain and vague world in which we exist. Fuzzy logic “ manipulates ” vague concepts such as “ warm ” or “ going fast ” , in such a manner that it helps design machines like air conditioners and speed control systems to move or switch from one set of control criteria to another.

Fuzzy logic is largely used to define the weights, from fuzzy sets, in neural networks. When crisp values are not possible to apply, then fuzzy values are used. We have already studied that training and learning help neural networks perform better in

Neuro-fuzzy hybridization is widely termed as fuzzy neural network (FNN) or neuro-fuzzy system (NFS) in the literature. Neuro-fuzzy system (the more popular term is used henceforth) incorporates the human-like reasoning style of fuzzy systems through the use of fuzzy sets and a linguistic model consisting of a set of IF-THEN fuzzy rules.

Fuzzy neural networks are software systems that attempt to approximate the way in which the human brain functions. They do this by utilizing two key research areas in computer science technology — fuzzy logic software development and neural network processing architecture.

The first algorithm is a multilayer feedforward neural network, which uses irradiance, ambient temperature, and power at the maximum power point as input variables. The neural network output enters a Sugeno type fuzzy logic system that precisely determines how many faulty modules are occurring on the power plant.
