A solution is said to be saturated which cannot dissolve any more of the substance that is mixed into it. So, when a saturated solution is kept in contact with any extra amount of solute it will not get dissolved. A solution is said to be unsaturated in which all the solute dissolves into the solvent and the solvent can be either liquid or gas.

~~Unsaturated Solutions | Types and Examples of Unsaturated----~~

Unsaturated solutions are solutions in which the amount of dissolved solute is less than the saturation point of the solvent (at that specific temperature gradient). If the amount of dissolved solute is equal to the saturation point of the solvent, the solution is called a saturated solution.

~~Unsaturated Solutions | Unsaturated solutions with----~~

• Saturated solutions are unable to dissolve solutes further in the solution phase, whereas unsaturated solutions could. • Usually, saturated solutions carry a precipitate at the bottom but unsaturated solutions do not. • With increasing temperature, saturation decreases but unsaturation increases. A saturated solution basically implies that all the solvent has been dissolved with the solute, such that if more solute is added, it would not dissolve; this is called a saturated solution. An unsaturated solution basically means that if you add more solute, it can and will still dissolve in the solvent until it reaches saturation.
